

WHEN DO YOU NEED A WMS?

Warehouse management systems are used when your workload and customer order requirements exceed your ability to manually meet demand through the use of basic tools like spreadsheets.

More considerations

- The amount of times your warehouse team touches or moves inventory is too high.
- You always need to increase staff in peak periods
- You have no way to measure performance of your pickers
- You don't really know how many people you need to successfully fill orders
- You have too much inventory
- You have a large number of returns, caused by picking errors.
- You are running out of space
- You have lots of complaints from customers
- Your warehouse cannot keep up with business growth

WMS COSTS

There are five cost elements associated with purchasing a WMS, when working out your ROI. These will vary depending on size and complexity.

1. Software
2. Hardware & Infrastructure
3. Ongoing support & maintenance
4. Implementation
5. Internal costs

EXPECTED EFFICIENCY IMPROVEMENTS

- Warehouse space optimisation
- Time Savings
- Labour reduction
- Error reduction
- Increased speed
- Improved delivery turnaround
- Improved order accuracy

A lean and efficient business starts in your warehouse

Optimising your warehouse helps you provide your customers with a seamless service experience, reduce your operating expenses, increase your revenue and working capital.

In today's highly competitive, global market, you're not only competing with local suppliers, but with huge global organisations - making it even more important to ensure your warehouse is optimised to ensure you delight your customers each and every time they place an order with your organisation.

If you're looking to improve your warehouse processes and effectiveness to streamline your operations, you'll be pleased to know it's easier than it seems.

Vardells VMR Warehouse solution provides a real time, integrated barcode solution, designed to streamline all warehouse operations to ensure your logistics operation delivers on-time, every time. Our aim is to provide a system that automates as many processes as possible to deliver maximum efficiency and ensure your business maintains the competitive edge.
